

## Mounting Signs on Ceiling Corridors

This mounting method may not be appropriate for certain corridor widths where the sign module length prevents sliding the sign on to the CMA extrusion.

The CMA may be used in short sections which allow one end of the sign to be engaged - rotated and slid over the CMT on the opposite end of the corridor.

**Fig 1. End View** (Shown with metal closure track)

\*Ceiling materials and conditions vary and require on-site assessment as to appropriate fasteners and additional above-ceiling support.
